Find the Perfect Greenhouse for Your Garden

Few things are as satisfying as harvesting your own vegetables and herbs straight from the greenhouse. The flavour of homegrown tomatoes, cucumbers, and chillies is unparalleled, and it's a joy knowing they're as fresh and natural as can be. When choosing a greenhouse, consider what you dream of growing – and remember, you'll never regret having that extra space for your plants to thrive and your passion for gardening to flourish.

This catalogue introduces you to Halls greenhouses, our proudly traditional English range which benefits from modern materials and design.

Halls greenhouses are divided into three product lines, Cotswold, Qube and Traditional and each has its strengths, special qualities and characteristics. Our wide product range certainly has something just for you, whether you are a novice or seasoned gardening enthusiast. You can find more inspiration at [Hallsgreenhouses.com](https://www.hallsgreenhouses.com).

Enjoy!

JULIANA GROUP

Halls Greenhouses is part of the Juliana Group. Juliana Group is a leading global supplier of quality residential greenhouses. Founded in 1963 by Mogens A. Stærmosé in Odense, Denmark, the family-owned company is today owned by third generation, Nikolaj Stærmosé. The headquarter remains Odense-based with subsidiaries in the UK and Germany and export to more than 20 countries.

‘We help people grow’. That is why our brands Halls, Juliana, and Gabriel Ash all set the frame for experiences that are as natural as they are magical. Despite our long history, we’re future-focused and curious on how we can improve the sustainability of our greenhouses. Learn more about Juliana Group at HallsGreenhouses.com.

		
Profiles with split horticultural glass (classic)	Profiles with polycarbonate (insulating)	Profiles with long-pane toughened glass (beautiful & strong)
Under the glazing you will find the product item number		

Halls greenhouses are available in up to three different glazings, and the different models are available in aluminium, powder-coated green or black. On the different pages you find the available options.

3 mm toughened glass**

Halls Cotswold

The Cotswolds is an area of outstanding natural beauty in south-west England. The hilly region is characterised by cosy small villages, ancient stone walls, winding roads and beautiful gardens. The Cotswold greenhouses are named after a number of villages in the area; Burford and Blockley.

The Cotswold greenhouses, crafted in 2015 with a nod to the strong English greenhouse tradition, were developed for gardeners seeking a robust structure with durable aluminium profiles inspired by the classic British model. These greenhouses blend timeless design with innovative features, providing the ultimate space for cultivation and relaxation to bring your greenhouse dreams to life.

Burford 610

Blockley 814

COTSWOLD

Discover the Advantages of the Cotswold Greenhouses!

Robust Construction

All models in the Cotswoldseries feature high-quality black powder-coated aluminium profiles, designed to last for decades. These robust profiles are specifically crafted to withstand the Northern European climate, and the integrated base makes assembly easier and more efficient.

Innovate Door Design & Zero Threshold™ System*

All Cotswold greenhouses feature the revolutionary, patented, Zero Threshold™ sliding door system, which eliminates the traditional threshold bar, reducing the risk of tripping. Finally, a greenhouse door system has been developed that ensures a smooth, jam-free operation. The Cotswold sliding doors all feature a superior door lock.

Large Roof Vents

During the summer months it is important to keep the growing area well ventilated. The large roof vents ensure that when the hot air rises it can escape out of the greenhouse.

Wide Gutter System

80mm wide built-in gutters maximise rainwater capture and are easy to clean. The 40 mm downpipes are supplied as standard and are compatible with widely available plumbing parts. The gutter system increases precious rainwater capture, reduces greenhouse leaks and minimises internal condensation drips. It is easy to install our water collecting system, which is an accessory available to all the Cotswold structures.

*UK Patent No. 2 989 886 (E)

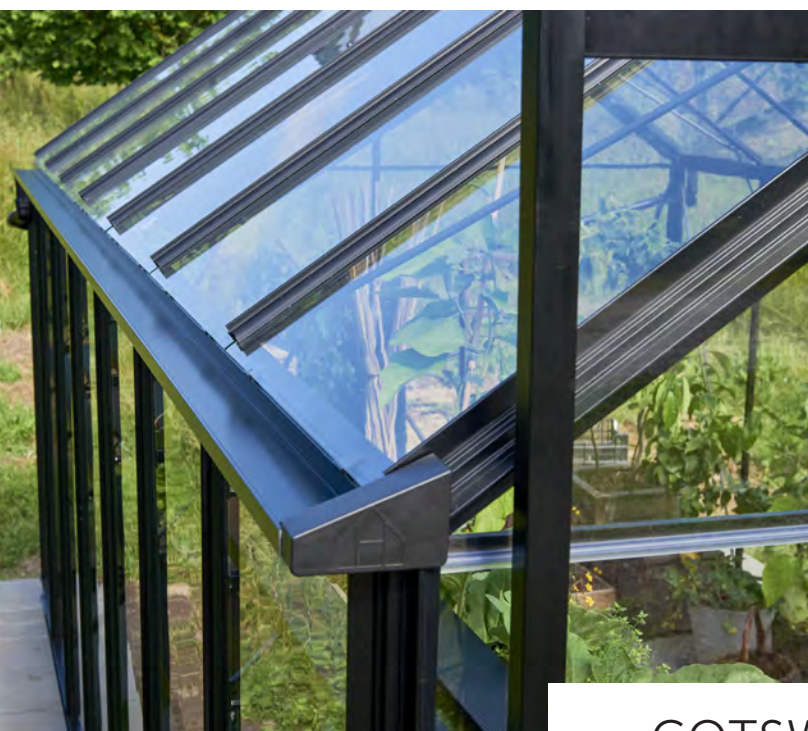

Personalise your Greenhouse

The strong, tubular ridge bar provides a strong structure and allows for optional cresting. The profiles have a T-slot, which allows numerous options to install staging, shelving and other practical accessories.

Space to Bring your Greenhouse Dreams to Life

All models feature extra-high eaves for more growing space and working comfort. The high eaves also allow an increased volume of air for an improved growing environment giving more room for you and your plants.

Cotswold greenhouses offer a timeless design-clean, modern, and lightweight. Equipped with 3mm long-pane toughened glass that eliminates traditional overlaps, they provide an uninterrupted, beautiful view and optimal light for your plants, ensuring ideal growth conditions.

Qube Square

Halls Qube

Qube is an innovative greenhouse series launched in 2019 and designed by Juliana, which combines modern, simple design with unique features. The square box section profiles, which inspired the series' name, provide a strong, stable structure that blends effortlessly into its surroundings. Qube is a modern classic, offering the freedom to add your personal touch and create a truly unique outdoor space.

The Qube series consists of Qube, Qube+ and Qube Square free-standing greenhouses with a single or double sliding door, and the Qube Lean-to designed to be affixed to a wall. Halls Qube is produced in our factory in Odense, Denmark.

MADE IN
DENMARK

Wide gutters for large
amounts of rain

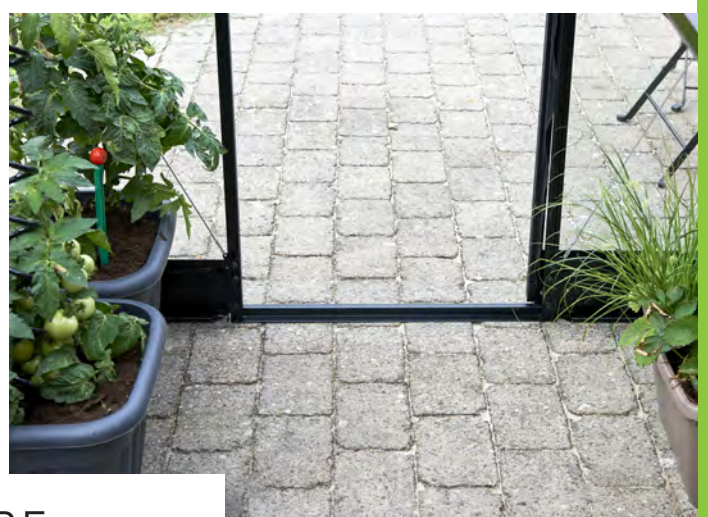

Halls Qube offers you

A greenhouse with timeless design which blends in with its surroundings. The sleek and simple design. All Qube greenhouses feature long-pane toughened glass, enhancing elegance, boosting stability, and offering optimal light conditions for your plants.

A solid space with our newly developed box section profiles which ensures a durable greenhouse. The unique box section profiles are designed to maximise aluminium's strength, using less material while enhancing durability compared to traditional profiles. This results in a strong, sturdy greenhouse with a light, elegant appearance. All Qube greenhouses are made from black powder-coated aluminium.

Revolutionary
sliding door

QUBE

A revolutionary strong sliding door design

that opens and closes easily. The door uses sliders and is constructed to ensure that it doesn't jam or jump out of the rail. The construction also makes the door very strong and when closed it is flush with the greenhouse and contributes to the elegant finish.

A low threshold that allows easy access and makes it easier to wheel in a small wheelbarrow or trolley. 3mm long-pane toughened glass offers increased safety and is less likely to be affected by footballs or stone chipping. If you are unlucky enough to break a pane, it will shatter into small pieces thereby significantly reducing the risk of injury. The long panes give the greenhouse a streamlined look and contributes to the airy feel.

Glass fitting using glazing capping, ensuring a beautiful finish. The capping is a neat alternative to clips, which damage the overall aesthetics and allows dirt to accumulate around them.

Scan and see
wind tunnel

Wide gutters for large amounts of rain and ready for optional 40mm downpipes. It is an advantage to be able to carry larger amounts of rainwater away, and for example collect it in a water butt and use it for watering. This is great for both the environment and saving money. The downpipes are not included with the greenhouse but can be purchased separately*.

Discover our range of integrated accessories, which adds functionality and depth while preserving aesthetic appeal. Enhance your greenhouse with automatic vent openers, integrated shelving, and staging to optimise the space and to introduce an extra dimension without compromising the elegant finish.

*When purchasing the Qube Square, two downpipes are included.

QUBE

Qube 68

Qube 66

Qube

The timeless style of the Halls Qube is designed to match most garden and house types. It has been created with innovative new profiles which guarantee a durable and robust greenhouse but, at the same time, have a simple and elegant look.

Qube Lean-to 26

Qube Lean-to 24

Qube Lean-To

Lean-to greenhouses allow you to use a part of a house wall, a shed or a part of the terrace for a greenhouse when the greenhouse dream needs a place to grow. At the same time, the wall of the building absorbs daytime warmth and during the evening the heat is dispersed inside the greenhouse. This extends growing season of the plants and creates a milder internal climate during colder weather.

Model Qube Lean-to	Profile finish	Size (m ²)	Width (cm)	Length (cm)	Eaves (cm)	Ridge (cm)	Door width (cm)	Side vents	6 mm poly- carbonate	With 3mm long-pane toughened glass

Atrium

The original greenhouse since 1934

Magnum 108

Traditional aluminium profiles

Halls Traditional

Halls Greenhouses was founded in the UK in 1934. Initially, the greenhouses were made of timber, but later Halls adopted the new material, aluminium, and the company became the first to mass-produce greenhouses for private customers. Hence, Halls Traditional is the essence of the famous English gardening tradition. The models have been copied over and over again, and it is not without reason, as the Halls Traditional greenhouses are of good quality at affordable prices, and you really get value for money. Ninety years of experience and product development do not fail, and we definitely recommend the original.

Most Halls Traditional are available in plain aluminium, powder-coated green or black aluminium. For most of the models, you can choose traditional split horticultural glass, long-pane toughened glass or polycarbonate.

High quality with excellent value for money

Selected models come with only toughened glass in single long panes with a refined trim between the gable glass panes, front and back, which adds a sleek, sophisticated finish. The glass in all the greenhouses is a good 60 cm/2 feet wide – a measurement that is in keeping with tradition and defines several of the product names.

The products have been developed over several years and the methods for fitting the glass, for example, varies from model to model. From the spring clips and retaining clips to glazing capping in the newer models. We continue to develop this classic range.

Halls Traditional is for those who prefer a traditional greenhouse in their garden, where simplicity and self-sufficiency are paramount. A safe choice and perfect for novice and experienced gardeners alike.

Wide selection of greenhouses in various shapes, colours & glazing

TRADITIONAL

Popular

This compact greenhouse is perfect for beginners and smaller gardens. The glazing options are easy to install with clips and rubber glazing gasket. A smooth-running sliding door and a window for effective ventilation ensure functionality.

When choosing 3mm long-pane toughened glass, you can upgrade to a capping option for an additional cost as an alternative to spring wire clips. The capping offers superior protection against the elements.

Universal 128 SD

Universal

Halls Universal is a spacious, traditional greenhouse with over 2 m in height, providing ample room for tall plants. The sturdy roof ridge and two windows ensure stability and ventilation. Available with 3 mm horticultural glass, 6 mm polycarbonate, or 3 mm toughened glass, the greenhouse features aluminium or powder-coated black or green profiles. A smooth sliding door within the gable frame eliminates a visible holder.

Opting for the Universal model with black profiles and 3 mm toughened glass also gives you the option of a double sliding door for enhanced access.

Magnum 148

Magnum

A perfect solution for gardeners seeking a spacious greenhouse. The double sliding door provides perfect access, and the generous eaves height ensures plenty of space for both you and your plants. All three sizes have four windows to provide the ventilation needed. The Magnum comes in either plain aluminium or a powder-coated green frame. The two larger sizes also come in black.

Choosing toughened glass in single long panes creates an exceptionally elegant greenhouse, reminiscent of classic orangeries. The single panes eliminate the need for overlaps and clips, while a refined trim between the gable glass panes, front and back, adds a sleek, sophisticated finish.

Garden Room

Garden Room

The Garden Room

The Halls Garden Room provides great value for money when it comes to overall size and innovative features.

Frame

The traditional greenhouse frame has been brought into the 21st Century and includes more bracing to help it cope with harsher weather. The roof pitch has been increased to provide more volume of air within the greenhouse, and also aid snow loading capacity. The new gutter offers a much improved water harvesting capacity to capture much more precious rainfall.

greenhouse

TRADITIONAL

Garden Room

Garden Room

Toughened Glass with Capping

The Garden Room is supplied with 3 mm long pane toughened glass; the best choice when it comes to glazing a greenhouse. The long pane toughened glass eliminates the normal overlap and can also better withstand high velocity impacts. If it does break, it breaks into small particles making it the ideal choice in a family oriented environment.

The capping secures the glass along the length of both sides of each pane making the greenhouse stronger. It also provides a superior finish, with the added bonus of being easier to clean.

Glassholders

The detail with glass holders, lifting the glass slightly from the gutter profile, allows condensation to run down into the gutters from inside the greenhouse.

Water Harvesting Gutter Corner Joint

The first of its kind; interior water harvesting component for greenhouses. This innovative design allows you to capture water on the inside of the greenhouse in two locations.

For water collection, downpipes for the external and internal gutters can be purchased separately.

Roof Vents

Four roof vents are supplied as standard to circulate and vent the huge volume of air contained within this large greenhouse.

Doors

The hanger style doors and innovative low threshold design eliminate the traditional stepping over or ducking to enter your greenhouse. Included as standard are industrial inspired door handles to ensure smooth operation.

TRADITIONAL

Altan 3

Altan 2

Altan 2

Altan

The popular Altan model comes in two sizes: 0,9 m² and 1,3 m². Both models come in mill aluminium, powder-coated green or black.

With a lean-to greenhouse, you have a lot of options to use the balcony or a smaller space on the terrace to create a green oasis growing your own tomatoes and cucumbers.

*Comes with 2 downpipe

Louvre Window

The louvre window for the Traditional series is available in aluminium, black or green, so it can easily match your greenhouse.

Plant shelf

The removable shelves with leather straps can be used for bottom-watering. F04572 (36 cm) · F04573 (76 cm).

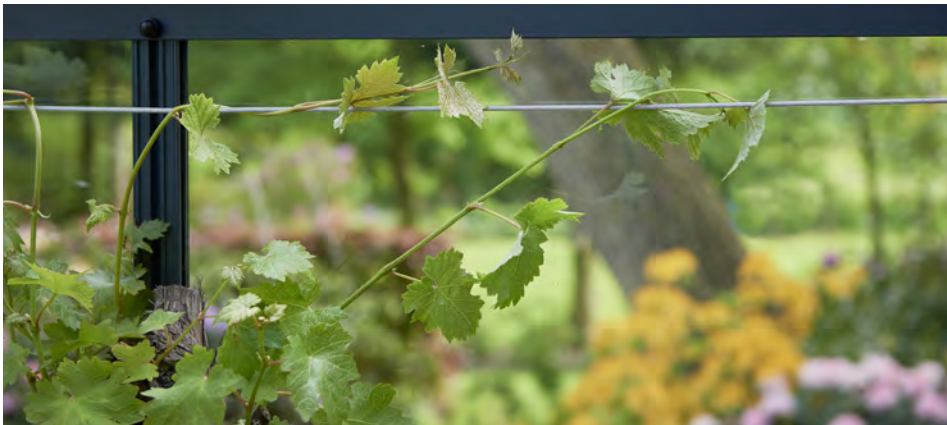

Tablet Holder

For tablet or phone. F04849.

Accessories

Once you have assembled your greenhouse, it is time to furnish and style it so you can start your greenhouse life. You can get a wide range of different accessories that fit the Halls range. Tables and shelves provide workplace and indispensable storage. You should also think about plant support, protection, heating, venting, temperatures, light etc.

Wire Set

The wire set can serve as solid support for vines. 2 pcs. 6 m. F04848.

Ventomax Window Opener

Best suited for glass. Can be set to open/close between 16°C and 25°C. F04000.

Accessories
that complete
your green-
house

Shelf brackets

Shelf brackets are the solution to make the type of shelf that fits your greenhouse.
3 pcs. F04811 (25 cm) · F04813 (50 cm).

Downpipe

Collect rainwater from the greenhouse roof with a downpipe.
For Popular, Universal, Magnum and Garden Room.

Integrated Greenhouse Shelves

The integrated greenhouse shelf is designed to be used for bottom-watering. F04570 (142 cm) · F04571 (213 cm).

Bag Holder

Big metal ring used as a bag holder but can be used for multiple practical purposes. Ø 30 cm. F04850.

Vanlet Irrigation Unit

Automatic watering and fertilising system Distributes water and fertiliser to plants through feed hoses, Y-shaped branch pipes and drippers Capacity: 10-150 litres of water a day. F04201.

Greenhouse Heater

Helps the temperature stay up in the greenhouse in cold times. F04453.

Aluminium Shelf

Flat aluminium shelf without a lip. F04504.

Aluminium Brackets

Used for supporting plants in the greenhouse, etc. Pack of 10 pcs. F04716.

Candle Holder

Create a cozy space with candles. 2 pcs. Ø 6,8 cm. F04852.

Pot Holder

Metal ring for pots or other practical purposes. Ø 8 cm. F04842.

Suspension Hooks

Suspension hooks for e.g. tools or gloves. 4 pcs. F04845.

Solar LED Lamp

The lamp gives a warm cozy light. F04841.

Univent Window Opener

Univent, which is well-suited for both glass and polycarbonate sheeting. F04031.

Roller Blinds

The roller blinds are attached directly to the glass with suction pads. E05119.

Soil Thermometer

Some plants, like cucumbers, require the temperature of the soil to rise to 18°C. F04351.

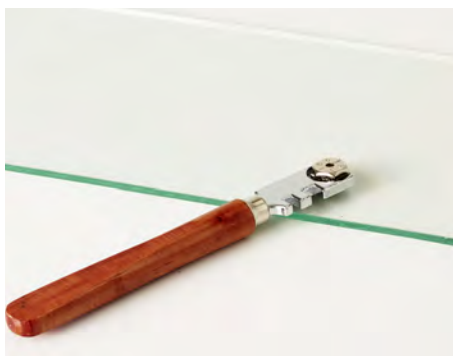

Min-Max Thermometer

A minimum-maximum thermometer that can be bolted in to the greenhouse profile. F04355.

Plant Spiral

Pull out the spiral to the desired length (max. 2 metres) and attach using the enclosed plant support eyelet. Pack of 3 pcs. F04905.

Glass Cutter

Allows for custom cutting of standard glass (not toughened glass). F04844.

Green Shading Net

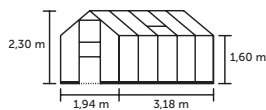

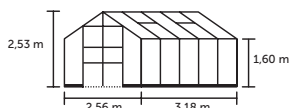

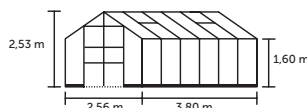

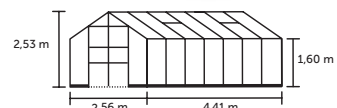

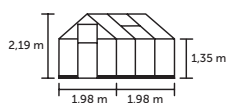

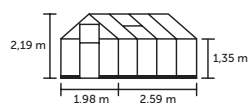

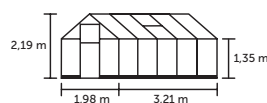

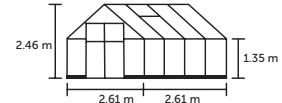

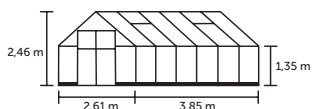

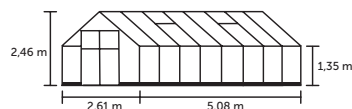

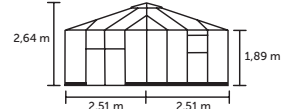

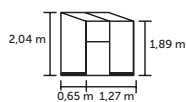

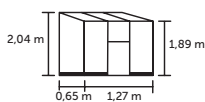

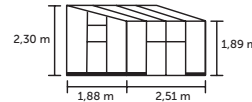

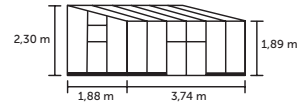

Ensures fast, efficient greenhouse shading. 150 x 370 cm. R04082 · 183 x 259 cm. R04085.

Nut Caps

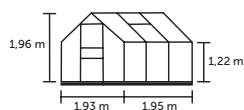

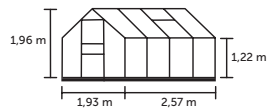

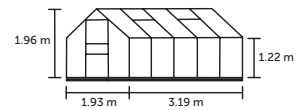

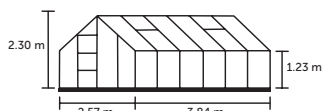

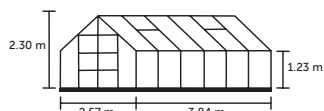

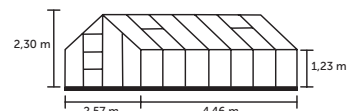

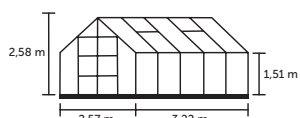

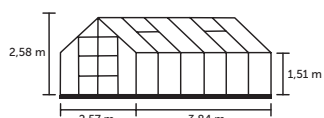

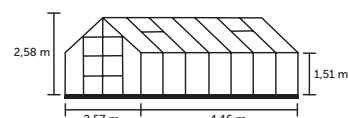

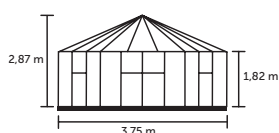

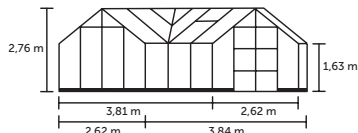

Covers the nuts that hold the profiles together. 20 pcs. F04846.
